Reporting for other projects what we are doing

GOAT PROJECT

I just want to explain a few things about how this project is going on. This is a project whereby it seems as if it is not profitable to the people. I understand that the aim of introducing this project here at our farm is that people they should have to benefit from this scheme for milk

Since we received these goats some have benefited a lot, but some not, due to the system that we were following before. But now the system has changed, hope that every beneficiary will be benefited from this scheme.

The system that we are following now is that instead of getting young goats and I give it to someone. We are just getting the mother and give it to someone. Why is it so, it is just because if we were following the system that our former committee was followed then few people will benefit from this scheme. As I am writing this letter we had a committee on 30.03.2011 we discussed that we should get three goats that we have as of now and give it to other people. This should be done this week. And we also agreed that we should buy a male goat next week, because of now we don't have a male goat. What so ever is happening in this project we will keep on informing you.

WATER HOLE

Hope that it seems as if we are just singing a song that we will finish our water hole. But now I am assuring you that everything is prepared for the water hole. We have already collected the sand and stones so that next week any day we have to work as we are doing with other things for GRACE we should contribute 25%. As you are aware that the hole was already dug and we put in the rings. Now we should just make the covering. This is a work for almost 2 hrs. If we will finish this work next week we will keep on informing you.

Thanks greeting to every member of GRACE in Germany
